DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of group III is acknowledged.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 15-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lacy et al(5079160).

Lacy teaches a method for extracting cells, particularly islets, from organs. The method utilizes a compatible protease solution which is made to flow into a chamber with inputs and outputs (see Fig 1) and which contains the subject organ. The organ is digested into cells by the enzyme and via gentle agitation facilitated by an "agitation enhancer" according to Col 4:

"Agitation enhancers" refers to blunt, macroscopic objects which are placed in the agitation chamber to increase the mixing encouraged by the agitation, rather than to physically macerate the solid materials.

Lacy does not teach that the enhancer (called an "agitator" by applicant) should have a void or all of applicant's other preferred embodiments. However it would have been obvious to one of ordinary skill in the art at the time the invention was made to use any hard spherical implement of an appropriate size to act as the enhancer of Lacy because the reference clearly provides guidance on what can be used as an "enhancer" or "agitator" as applicant calls it in Col 4:

Agitation of the chamber containing the organ is also applied during this process to enhance the liberation of the cells, and the effect of the agitation is enhanced by placing smooth "enhancers" such as marbles in the chamber. The level of agitation can be controlled by altering the characteristics of the agitation enhancers---for example, marbles could be encased in tubing to reduce their mobility.

As the reference clearly indicates that the various proportions, materials and amounts of the ingredients used in the claimed composition are result effective variables, they would be routinely optimized by one of ordinary skill in the art in practicing the invention disclosed by those references.

Accordingly, the claimed invention was prima facie obvious to one of ordinary skill in the art at the time the invention was made especially in the absence of evidence to the contrary.
